- VNA Health Care 630-978-9835

## Looking at the Total Picture

*H*olidays are stressful, whether you are dealing with a mentally ill family member, or simply coping with life without the added pressure and stress of mental illness. It is important to have a plan, or perhaps even a back-up plan. Remember that many mental illnesses are cyclical in nature. If your family member has recently had a psychotic break, or if he or she is adjusting to new medicines, it is important that you keep things simple. Limit entertaining and concentrate on one or two quiet activities with the core family, like a special meal and trimming the tree (don't go to Aunt

Dolly's where 30 relatives are gathering, many of whom may not understand the fragility of the mentally ill family member's state of mind). It is also important to avoid functions where alcohol is freely flowing; most psychotropic medications should not be taken with alcohol. If your family member is stable, talk to him or her about their choice as far as their level of participation is concerned. Make sure you make it clear that if the "hubhub" gets to be too much, it is okay for them to go to their room.

Hopefully, your guests or circle of friends will know to behave with discretion and consideration. Take a look at the total picture. For example, your mentally ill family member may absorb much of your time and attention, especially a child. Ask yourself what are you doing that is special with other family members. Perhaps an activity "outside" the home is in order with them. Last, but by no means last, if you are the principal caregiver, what are you doing for YOU? Remember, fewer Christmas cookies, a long hot bath, and a quiet Christmas service, listening to your favorite Christmas music, or sitting quietly and making a gratitude list, whatever centers you and helps you breathe deeply, is going to make your holiday less stressful and more meaningful.
